

your sketch/drafting pencil.

www.remarkablepens.com

This sketch/drafting pencil operates like many mechanical pencils by pushing down on the cap to advance the lead. To sharpen your pencil, just advance the lead about 1/2 inch, pull the cap out, insert the lead into the cap's end and twist over a trashcan. While in use, you may also unscrew the top of the cap to expose an eraser. With the cap back in place, depress and hold to disengage the inner mechanism and push the lead back. To add more lead, it is easiest to insert it through the point end. Additional lead may be purchased at most office/artist/hobby supply stores, and are available at many locations in different hardness from 4B to 6H.
